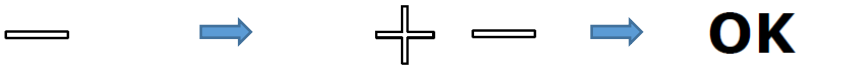
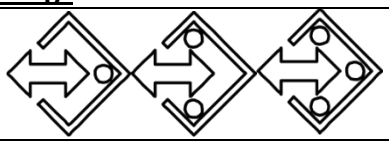
User profile



press until “CURRENT USER No.” appears — Adjust value — Accept new value

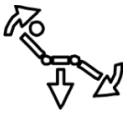
Patient chair settings

Memory 1-2-3 (automatic)



To save a dental chair position, move the chair to the required position and hold down the key until you hear the beep that indicates that the position has been saved.

Chair to autoposition (automatic)



To save a dental chair position, move the chair to the required position and hold down the key until you hear the beep that indicates that the position has been saved. This enables storage of the pantographic arm reset position.

Chair rinsing (automatic)

To save a dental chair position, move the chair to the required position and hold down the key until you hear the beep that indicates that the position has been saved. This enables storage of the rinse position.
